<b>WIDTH</b>	15'
<b>SHIPPING WEIGHT</b>	6 lbs. per linear foot.

### PRODUCT INFORMATION

PERFECT LAWN was first introduced at the PGA show as a synthetic fringe. The product is engineered for a realistic ball lie. The weight of this product will allow you to simply mount the turf around the green with the use of landscape stakes. When the golf ball lands on the fringe you will see how well the ball nestles. For the best feel always face the file direction toward the cup.

The product has found its place in the Landscape America collection. The wonderful color, and the non-glare tencate polyethylene. The nylon adds a new foundation for the turf that helps and cushion and causes the P.E. to regain its original appearance after traffic has depressed the pile.
